

Hello from the **light pollution working group**! We are working to understand the role of artificial light at night in driving insect declines. We have close to 50 members in every continent except Antarctica!

Among other activities, we are currently planning a globally distributed experiment on insect flight-to-light behavior, a symposium at SICB, and an in-person workshop at Exeter University (more details [**here**](#)).

If you are interested in learning more about our working group, email Dr. Avalon C.S. Owens at [**aowens@fas.harvard.edu**](mailto:aowens@fas.harvard.edu).
